

1. GENERAL GAME INFORMATION

Game Title: Medieval Chess (This may change)

Genre

- Strategy
- Turn-Based
- Multiplayer-focused (may include an additional campaign mode)
- Hexagon-based map

Platform

- PC (Windows)
- Steam

Target Audience

- PC players who enjoy Civilization, XCOM, Dota Chess, TFT, and strategy games in general
- Ages 18–45, system- and decision-oriented players
- Indie strategy enthusiasts

2. CORE FANTASY

A turn-based strategy game played on a hexagonal grid map (initially planned as 10x10, but subject to change), where players select medieval military units and attempt to outmaneuver and defeat their opponent.

The player:

- Navigates a map with different terrain types that provide advantages and disadvantages to units.
- Controls units with distinct stats and values.
- Must anticipate the opponent's next turn while making decisions.
- Uses units that follow a rock-paper-scissors counter system.

3. CORE GAMEPLAY LOOP

1. Map Generation (Procedural Hex Map): Each match generates a different map layout with varying terrain type distributions.
2. Both players start with equal gold. Units have different costs (stronger units cost more). Based on the generated terrain and their preferred strategy, players select and deploy units on the board as efficiently as possible within their budget.
3. The match begins.
4. Player Actions (Turn-Based):
 - Move
 - Attack (Basic attack or special ability)
 - Rotate (Each unit has a facing direction. Attacks from behind deal bonus damage, so positioning and facing matter.)

5. Combat results are determined by a formula similar to: Attacker's Attack Value + Dice Roll vs Defender's Defense Value + Dice Roll. The defending unit may lose soldiers or successfully block the attack depending on the outcome.
6. The turn ends and passes to the opponent.

4. GAMEPLAY MECHANICS

4.1 Harita Sistemi

- Hex grid
- Procedural generation
- Terrain Types:
 - Plains
 - Forest
 - Hills
 - Marsh
 - Steppe(More types can be added)
- Each terrain type provides attack or defense buffs/debuffs depending on the unit type occupying it.

4.2 Unit System

Unit Types

- Light Infantry
- Heavy Infantry
- Spearman
- Archer
- Light Cavalry
- Heavy Cavalry
- Cavalry Archer

(More types can be added)

Common specification

- Number of soldiers in the unit
- Attack / Defense vs Infantry/ Defense vs Cavalry / Defense vs Archers
- Rotation/Facing system (6 possible directions corresponding to hex sides)

6. WIN & LOSE CONDITIONS

- A player loses if all their units are destroyed.
- Alternatively, if their “King” (a designated unit) is eliminated.

Both options may exist as separate game modes in the final version.

7. UI / UX

- Minimalist design
- Hover tooltips
- Maximum information on a single screen
- Mouse odaklı tasarım

8. ART & AUDIO DIRECTION

Visual Style

- Low-poly / Flat 2D
- Readability prioritized over detail
- Minimal animation

Ses

- Ambient loop
- Minimal combat SFX
- UI feedback sounds

9. TECHNICAL STRUCTURE (Overview)

- Engine: Unity
- Single scene + data-driven architecture
- ScriptableObject-heavy system
- Multiplayer infrastructure with stable connectivity. Save & load system for handling disconnect scenarios

10. MONETIZATION

- One-time purchase
- Target price: **\$9.99 – \$14.99**
- DLC potansiyeli:
 - New faction (unique unit types and abilities))
 - New map types

11. REFERENCE GAMES

- XCOM series
- Civilization series
- Teamfight Tactics (TFT)
- Dota Chess
